Through continuous research into the development of innerspring manufacturing processes, Leggett & Platt has created a unique pocketed system called **LDP!**

This technically advanced production process allows the manufacture of high volume, cost effective, entry level pocketed innersprings in a production efficient way.

Leggett & Platt has the technology to combine this unique process with standard or proprietary pocketed innersprings, generating cost sensitive products with all the support characteristics, features and benefits of the chosen system!

This product is available in a variety of coil heights, coil counts, wire diameters and conventional zoning configurations.

The **Active Support Technology™** of innersprings allow your muscles to relax in a more natural sleep position. The coils adjust instantly to your sleep movements, comforting and supporting your body actively.
