

pocket

Leggett & Platt offer a comprehensive range of **pocketed** innersprings of the very finest quality, our standard pocket programme uses a boxed assembly technique in combination with a centre gluing pattern.

This assembly method combined with the welding of each individual coil into its own fabric pocket, ensures the coils move freely and independently, maximising the performance and comfort of the unit.

Pocket springs are highly responsive to even the smallest changes in weight distribution, body shape and sleeping patterns, providing support where it's needed most without compromising on comfort!

Zoned options are available in standard 3, 5 and 7 zone configurations.

All manufactured in a variety of wire diameters, coil counts, unit heights and a full complement of bedding sizes.

Characteristics, features and benefits include:

- Superb levels of comfort and support
- Zoned and nested options
- High coil counts and surface coverage
- Natural air flow
- Advanced production and assembly technology
