SoftTouch™

variable rate pocket springs

Provide a special combination of responsiveness, comfort and support, making them highly receptive to individual body weights and shapes.

Variable rate coil geometry is the secret behind the success of SoftTouch! Our advancements in fine wire technology allow the manufacture of specially designed **progressive**, self conforming innersprings. These springs provide initial softness to the touch, becoming firmer for needed support as weight is applied, generating a luxuriously comfortable yet supportive innerspring system.

Each Spring is encased in its own fabric pocket, actively reducing partner disturbance and "roll-together". These fabric pockets are boxed assembled and secured together by a centre gluing pattern. This glue pattern ensures each SoftTouch pocket spring is free to act independently to its neighbour, maximising individual spring and overall unit performance.

- The overall effect creates an **initial softness** and comfort followed by good responsive support.
- This product is available in a variety of coil heights, coil counts, wire diameters and conventional zoning configurations.
